

Our steel sub-frame floor is designed to work with Custom Covers' revolutionary aluminium floor extrusion.

It has the flexibility to work with the whole range of structures from 3m wide to 15m width to create a level floor.

Main Uses
Sub frame flooring for whole range of Coverspan Structures
Only needs one size of floor board for whole range. 2950 x 500
Sub frame works with Custom Covers reversible floor profile
Allows sub frame to be levelled prior to floor laying

Components
Longitudinal galvanised steel bearers with integral footplates
Transverse bearers to reduce bounce in floor boards
Longitudinal elements designed to expand to match 3.03m bay of 12 & 15m span structures
Steel fixings used throughout
Steel end plates to lock finished floor securely
Sub frame high step over tent foot plates

Sub-Frame High Step-over base plate
